The present sequence is human tumour necrosis factor (TNF) receptorassociated factor (TRAF2) binding protein isoform, IREN-E. A fragment of this IREN-E molecule is capable of binding to TRAF2 protein at position 225-501. The invention relates to human tumour necrosis factor (TNF) receptor-associated factor (TRAF2) binding protein designated as IREN (KappaB REGHISTOR). Its isoforms IREN-18, IREN-E and their corresponding CDNA molecules. IREN is useful for modulating/mediating the activity of transcription factor NF (Nuclear Factor)-kappaB or any other intracellular signalling activity mediated by TRAF2. IREN is useful in the prevention and treatment of a pathological condition associated with NF-kappaB induction (abnormal) e.g. AIDS (acquired immune deficiency of the prevention and graft-vs-host reactions. IREN also plays an important cole in the control of inflammation and other non-apoptotic effects of method for screening, identifying and producing a molecule capable of modulating activities mediated by IREN. IREN antibodies are useful for the purification of new proteins from different sources, including cell extracts or transformed cell lines, in addition IREN can be used in diagnostic purposes for identifying disorders related to abnormal diagnostic purposes for identifying disorders related to abnormal functioning of cellular effects mediated directly by TRAF proteins

The present sequence is human turmour necrosis factor (TNF) receptorassociated factor (TRAF2) binding protein isoform, IREN-10B. A fragment of this IREN-10B molecule is capable of binding to TRAF2 protein at content at the invention relates to human turmour necrosis factor (TNF) receptorassociated factor (TRAF2) binding protein designated as (TNF) receptorassociated factor (TRAF2) binding protein designated as IREN-10B. The present invention describes primer sets for synthesising 5602 full-length cDMAs defined in the specification. Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence. Where the oligonucleotide comprises a 1'-end sequence, where the oligonucleotide comprises a 1'-end sequence, where the oligonucleotide comprises a 1'-end sequence, where the oligonucleotide comprises a 1-end sequence; where the oligonucleotide comprises a 1-end sequence; where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence 3'-end sequence; selected from those defined in the specification. The primers are used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the

The internation relates to isolated polymiciscide (ii) and polypeptide (iii) regequences. (i) is useful as hybridisation probes, polymiciscide (iii) regequences. (i) is useful as hybridisation probes, polymiciscidenties are also used in diagnostics as expressed sequence tags for identifying expressed sequence tags and involving expressed sequence tags for identifying expressed sequence to the internation and into into an antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food suspended in tissue, as molecular weight markers and as a food suspended in the binding partners are useful for reacting disorders involving aberrant protein expression or biological activity. The involving aberrant protein expression or biological activity. The collapseptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences of the invention. Note: The sequence data for this amino acid sequences of the invention. Note: The sequence data for this electronic format directly from MNPO at the vipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ô

```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABH30511), expressed DNA aequences (ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      256
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     69 RGLALTAAA-----IKQAAGFASKTETEPVFWYVKEVLNKHELQRFYSLRHIASD 119

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    유
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g
                                                                                 The invention relates to isolated polynucleotide (I) and polypeptide (II).

sequences. (I) is useful as hybridisation probes, polymerase chain
reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
and in recombinant production of (II). The polynucleotides are also used
in diagnostics as expressed sequence tags for identifying expressed
genes. (I) is useful in gene therapy techniques to restore normal
activity of (II) or to treat disease states involving (II). (II) is
useful for generating antibodies against it, detecting or quantitating a
cuseful for generating antibodies against it, detecting or quantitating a
cuseful for generating antibodies against it, detecting or quantitating
consupplement. (II) and its binding partners are useful in medical imaging
of sites expressing (II). (I) and (II) are useful for treating disorders
involving abberrant protein expression or biological activity. The
polypeptide and polynucleotide sequences have applications in
collapsostics, forensics, gene mapping, identification of mutations
condition acid sequences. ABG00010-ABG30377 represent novel human diagnostic
amino acid sequences of the invention. Note: The sequence data for this
patent did not appear in the printed specification, but was obtained in
electronic format directly from MIPO at
the propertion of the printed specification, but was obtained in

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        17;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  72 LSATFNVIAGDVER-RPEPSFWAPCMVFWHKQVIEQVQGLSQITSETGQCRAWVRQSLNE 130

```
Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention. The polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention differentiation activities, including cytokine, cell proliferation or cell differentiation activities, including cytokine, cell proliferation or cell differentiation activities, receptor or ligand activities, or may be involved in oncogenesis receptor or ligand activities, or may be involved in oncogenesis, receptor or ligand activities, or may be conditions or the invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions include conditions, e.g., by protein or gene therapy. Such conditions include conditions, e.g., by protein or gene therapy. Such conditions include conditions, e.g., by protein or gene therapy. Such conditions include conditions include conditions include conditions e.g., by protein or gene therapy. Such conditions include conditions and ulcers), while those with including repeats of the invention are encoding them) may be used to promote enlisted and society and ulcers), while those with immunomodulatory activities may be used in the treatment of viral, because the used to an activity may be used in the invention of an author or an activity may be used in cell culture to an activity may be used in cell culture to an activity may be used in the used to an activity of a such activities a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis

myoclonic epilepsy ragged red fibre syndrome; MERRF; cancer;
neuroprotective; nootropic; antidiabetic; anticonvulsant; antiarthritic;
New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases which the gene is involved, or as target molecules for gene therapy.
                                                                                                                                                                                                         The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human heat mitochondrial protein as a therapeutic target SeqID2491

This invention relates to novel mitochondrial targets that can be used for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRR) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, anticonvulsant, antiarthritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.

                                                                               ద
                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to isolated polymuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGN) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food pupplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders polypeptide and polymuclectide sequences have applications in disquares for gene mapping, identification of mutations are tesponsible for genetic disorders or other traits to assess biddiversity and to produce other types of data and products dependent on DNA and anno acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the vivo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       20;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      197

The invention relates to a method of identifying compounds that influence fat cell number or size comprising providing a cell that expresses a gene and an agent, exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the agent. The method also comprises providing an expression vector and an agent, exposing the cell to the agent of the gene in an expression of the gene of the agent and identifying fat cell number or size in the subject with the agent comprises an antisense of oligonucleotide. The subject comprises an ammal, preferably a human. The oligonucleotide to the agent, detecting binding of the agent to the agent, detecting binding of the agent to the oppypeptide or a change in an activity of the polypeptide, treating a comprises an antibody. A method of regulating fat cell subject with the agent comprises an antibody. A method of regulating fat cell number or size comprises providing a subject containing fat cells and an agent that changes the expression of a gene, and treating the subject with the agent under conditions so that fat cell size or number in the subject is altered. The method is useful for identifying a composition for influence fat cell number or size, for preparing a composition for treating or preventing obesity or diabetes. This sequence represents a composition for treating or preventing obesity or diabetes. This sequence represents a composition in the constant of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     27;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Identifying compounds that influence fat cell number or size for treating or preventing obesity or diabetes by exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding pattners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this electronic format directly from MPO at the printed specification, but was obtained in electronic format directly from MPO at the printed specification, but was obtained in electronic format directly from MPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           152 TFYEDWSFVMDEERSSMLPTMAAGLNSILFAINIDNKDLN------GQSKFAPTVSDLL 204

Patent No. 6703491

GENERAL INFORMATION:

APPLICANT: Homburger et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster;

FILE REFERENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: PatentIn Ver. 2.0

LENGTH: 270
                                                                                                                                                                                                                           Sequence 4, Appli
